

The figure displays a large, complex network graph with nodes and edges. The nodes are categorized into five distinct clusters, each represented by a different color and shape:

- Green Cluster (Top Right):** Contains numerous nodes, many of which are green triangles. These nodes are highly interconnected with each other and with nodes in the other clusters.
- Purple Cluster (Top Left):** Features nodes, including purple triangles, that are primarily connected to other nodes within this cluster.
- Yellow Cluster (Bottom Right):** Includes nodes, some represented by yellow triangles, which are densely connected to nodes in the green cluster.
- Purple Cluster (Bottom Left):** Consists of nodes, including purple triangles, that are mostly connected to other nodes in this cluster.
- Light Blue Cluster (Center):** Acts as a central hub, containing nodes that are connected to members of all other clusters, facilitating communication between the different groups.

The edges represent interactions or relationships between the nodes, forming a dense web of connections across the entire network.
